# Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>
1.1	Studied systems . . . . .	2
1.2	Free fermions in metals vs. massless Dirac fermions in graphene . . . . .	6
1.2.1	”Free” fermions in metals . . . . .	6
1.2.2	Massless Dirac fermions in graphene . . . . .	7
1.3	Classical vs. quantum transport . . . . .	10
1.3.1	Drude formula and Einstein relation . . . . .	11
1.3.2	Quantum effects . . . . .	12
1.4	Second quantization: short introduction . . . . .	15
1.4.1	Bosons . . . . .	15
1.4.2	Fermions . . . . .	16
1.5	Heisenberg vs. Schrödinger pictures . . . . .	17
1.6	Problems . . . . .	17
<b>2</b>	<b>Semiclassical Boltzmann theory</b>	<b>19</b>
2.1	Semiclassical Boltzmann equation . . . . .	22
2.2	Observables . . . . .	23
2.3	Elastic scattering and diffusive limit . . . . .	24
2.3.1	Currents in the diffusive limit . . . . .	27
2.4	Inelastic scattering . . . . .	28
2.4.1	Relaxation time approach . . . . .	29
2.4.2	Electron-electron scattering . . . . .	30
2.4.3	Electron-phonon scattering . . . . .	31
2.5	Junctions . . . . .	32
2.6	Thermoelectric effects . . . . .	33
2.7	Problems . . . . .	34
<b>3</b>	<b>Scattering approach</b>	<b>37</b>
3.1	Scattering region, leads and reservoirs . . . . .	37
3.1.1	Transverse modes in semi-infinite leads . . . . .	38
3.1.2	Current carried by a transverse mode . . . . .	40
3.1.3	Wire between two reservoirs . . . . .	41
3.1.4	Quantum point contacts . . . . .	42
3.2	Scattering matrix . . . . .	45

3.2.1	Some properties of the scattering matrix . . . . .	46
3.2.2	Combining scattering matrices . . . . .	48
3.3	Current from scattering . . . . .	49
3.4	Examples . . . . .	51
3.4.1	Voltage probe . . . . .	51
3.4.2	Two-probe vs. four-probe setup . . . . .	51
3.4.3	Resonant tunneling . . . . .	52
3.4.4	Diffusive wire and Drude formula . . . . .	53
3.5	Models for inelastic scattering and dephasing . . . . .	53
3.6	Calculating the scattering matrix (**) . . . . .	54
3.7	Problems . . . . .	56
<b>4</b>	<b>Interference effects</b>	<b>59</b>
4.1	Aharonov-Bohm effect . . . . .	60
4.2	Localization . . . . .	61
4.2.1	Weak localization . . . . .	64
4.2.2	Weak localization from enhanced backscattering . . . . .	64
4.2.3	Microscopic calculation with Green's-function techniques (**) . . . . .	66
4.2.4	Dephasing . . . . .	67
4.2.5	Magnetic field effect . . . . .	68
4.2.6	Interaction contribution (**) . . . . .	69
4.2.7	Strong localization (**) . . . . .	70
4.3	Universal conductance fluctuations . . . . .	71
4.3.1	Effect of dephasing . . . . .	73
4.4	Problems . . . . .	74
<b>5</b>	<b>Single-electron tunneling and Coulomb blockade</b>	<b>76</b>
5.1	Charging energy . . . . .	76
5.1.1	Single-electron box . . . . .	78
5.1.2	Single-electron transistor (SET) . . . . .	80
5.2	Tunnel Hamiltonian and tunneling rates . . . . .	81
5.3	Master equation . . . . .	83
5.4	Higher-order effects . . . . .	85
5.5	Dynamical Coulomb blockade . . . . .	88
5.5.1	Phase fluctuations . . . . .	90
5.5.2	Example: resistive environment . . . . .	91
5.6	Other single-electron devices . . . . .	92
5.6.1	Coulomb blockade thermometer . . . . .	92
5.6.2	Radio frequency SET . . . . .	94
5.6.3	Single electron pump . . . . .	95
5.7	Problems . . . . .	97

<b>6</b>	<b>Quantum dots</b>	<b>99</b>
6.1	Anderson Hamiltonian . . . . .	100
6.1.1	Spectral function . . . . .	101
6.2	Weakly interacting limit . . . . .	103
6.3	Weakly transmitting limit: Coulomb blockade . . . . .	105
6.3.1	Metallic limit . . . . .	108
6.3.2	Two-state limit . . . . .	109
6.3.3	Addition spectrum . . . . .	109
6.4	Kondo effect . . . . .	110
6.5	Problems . . . . .	115
<b>7</b>	<b>Introduction to superconductivity</b>	<b>116</b>
7.1	Cooper pairing . . . . .	116
7.2	Main physical properties . . . . .	117
7.2.1	Current without dissipation . . . . .	117
7.2.2	Meissner effect . . . . .	118
7.2.3	BCS theory briefly . . . . .	119
7.2.4	Energy gap and BCS divergence . . . . .	121
7.2.5	Coherence length . . . . .	122
7.3	Josephson effect . . . . .	122
7.4	Main phenomena characteristic for mesoscopic systems . . . . .	124
7.4.1	Andreev reflection . . . . .	125
7.4.2	Proximity effect . . . . .	126
7.5	Problems . . . . .	128
<b>8</b>	<b>Superconducting junctions</b>	<b>129</b>
8.1	Tunnel contacts without Josephson coupling . . . . .	130
8.1.1	NIS contact . . . . .	130
8.1.2	SIS contact . . . . .	131
8.1.3	Superconducting SET . . . . .	131
8.2	SINIS heat transport and pumping . . . . .	136
8.2.1	Thermometry with (SI)NIS junctions . . . . .	139
8.2.2	Brownian refrigeration . . . . .	140
8.2.3	Electronic refrigerator with charging effects . . . . .	140
8.2.4	Accurate charge pumping with SINIS devices . . . . .	142
8.3	Josephson junctions . . . . .	143
8.3.1	SQUIDs . . . . .	144
8.3.2	Resistively and capacitively shunted junction model . . . . .	145
8.3.3	Overdamped regime . . . . .	146
8.3.4	Underdamped regime . . . . .	147
8.3.5	Escape process . . . . .	148
8.3.6	Quantum effects in small junctions . . . . .	149
8.3.7	”Tight-binding limit” . . . . .	150
8.3.8	”Nearly free-electron limit” . . . . .	151
8.3.9	Dynamic capacitance . . . . .	153
8.4	Problems . . . . .	153

<b>9</b>	<b>Fluctuations and correlations</b>	<b>155</b>
9.1	Definition and main characteristics of noise . . . . .	155
9.1.1	Motivations for the study of noise . . . . .	157
9.1.2	Fluctuation-dissipation theorem . . . . .	158
9.1.3	Thermal and quantum fluctuations . . . . .	161
9.1.4	Shot noise . . . . .	161
9.2	Scattering approach to noise . . . . .	162
9.2.1	Two-terminal noise . . . . .	163
9.3	Boltzmann-Langevin approach . . . . .	165
9.3.1	Equation for the fluctuating distribution function . . . . .	166
9.3.2	Correlator of the fluctuations . . . . .	167
9.3.3	Fluctuations in a quasi-one-dimensional geometry . . . . .	168
9.4	Langevin approach to noise in electric circuits . . . . .	169
9.5	Cross correlations . . . . .	170
9.5.1	Equilibrium correlations . . . . .	171
9.5.2	Finite-voltage cross correlations . . . . .	171
9.6	Full counting statistics . . . . .	172
9.6.1	Basic statistics . . . . .	173
9.6.2	FCS of charge transfer . . . . .	174
9.7	Heat current noise . . . . .	175
9.8	Problems . . . . .	176
<b>10</b>	<b>Dissipation in quantum mechanics</b>	<b>180</b>
10.1	Relaxation . . . . .	181
10.2	Dephasing . . . . .	182
10.3	Explicit model for dissipation: Caldeira-Leggett model . . . . .	185
10.4	Problems . . . . .	187
<b>11</b>	<b>Exotic properties of graphene</b>	<b>189</b>
11.1	Klein paradox . . . . .	190
11.2	Pseudodiffusion . . . . .	193
11.3	Valleytronics . . . . .	196
11.3.1	Zigzag ribbons . . . . .	196
11.3.2	Valley filters and valves . . . . .	197
<b>12</b>	<b>Summary of the main mesoscopic effects</b>	<b>199</b>
12.1	Main mesoscopic effects . . . . .	199
12.1.1	Interference effects . . . . .	200
12.1.2	Relaxation . . . . .	200
12.1.3	Single-electron effects . . . . .	200
12.1.4	Effects related to finite energy level spacing . . . . .	201
12.1.5	Graphene: high-energy physics on a sheet of graphite . . . . .	201
12.1.6	Mesoscopic superconductivity . . . . .	202
12.1.7	Shot noise, correlations and statistics . . . . .	202
12.2	Different theoretical models . . . . .	204
12.2.1	Scattering theory . . . . .	204

12.2.2 Boltzmann (-Langevin) theory . . . . .	205
12.2.3 Master equation approaches . . . . .	206
12.2.4 Linear response theory . . . . .	206
12.3 Systems and effects not described in the course . . . . .	207
